Maths Dictation

Solve the following algebraic expressions:

$$(1 - 2x)(1 + 2x) =$$

open round bracket, one minus two x, close round bracket, times, open round bracket, one plus two x, close round bracket

$$\left(4x^3y^2 - \frac{5}{4}\right)^2 =$$

open round bracket, four times x to the third power y to the second power minus five over four, closed bracket – all squared
